Investment Objective

The investment objective of the Sub-Fund is to provide returns in line with short- and medium-term debt corporate and sovereign markets in the Eurozone of investment grade quality.

The Sub-Fund invests its assets primarily in short- and medium-term debt securities of sovereign, government, corporate or supranational issuance and at least investment grade quality, money market instruments which have been awarded one of the three highest available credit ratings by each recognized credit rating agency and deposits in European credit institutions, 'Sovereign issuance' should be understood as debt instruments issued or guaranteed by a central, regional or local authority or central bank of a Member State, the European Central Bank, the European Union or the European Investment Bank.

Secondarily the Sub-Fund invests in structured financial instruments and in financial derivative instruments. Currency derivatives may only be used for hedging currency exposure in non-base currency securities.

The investment portfolio will aim to maintain a duration of lower than 3 years. The Sub-Fund is not allowed to invest directly or indirectly in equity securities or commodities, including via derivatives. The Fund is actively managed and does not track any benchmark index.

Investor Profile

The Sub-Fund has a low risk profile and is addressed to risk averse investors who want Euro currency linked exposure and seek to combine satisfactory returns and immediate liquidity.

Portfolio Strategy

The portfolio delivered a positive return in the fourth quarter, outperforming the relevant market. This strong performance was mainly driven by strategic asset allocation decisions, particularly an early positioning of overweight in corporate bonds and an underweight in government debt. During the quarter, although the overweight corporate stance gradually diminished, it remained the prevalent portion of the portfolio both in notional and duration terms. A general overweight risk positioning benefited the sub-fund, as there was a significantly good performance of the portfolio constituents during the quarter. While some corporate holdings, such as Ford, Poland and Novo Nordisk contributed positively thanks to tighter credit spreads and successful refinancing activity, certain financial names—especially Greek banks—faced headwinds from earnings pressures and wider spreads. Yield curve positioning slightly detracted from performance as eurozone government yields rose across most maturities, and especially some slightly longer-term positions affected negatively the overall result. However, active management in the intermediate part of the curve helped limit the impact. Portfolio duration was at elevated levels at the beginning of the quarter (2.7). There were extended alterations in the portfolio positioning resulting in elevated volatility in duration. The final duration print for the quarter came at 2.3.

Risk Indicator (in yellow)

The risk indicator assumes you keep the investment for 3 years.

* Risk indicator refers to Eurobank Share Class.

The risk indicator provides guidance on the level of risk associated with this product compared to others. It highlights the likelihood of the product incurring a financial loss. A lower value of the Risk Indicator suggest more stable, less volatile investments. At an early stage and you may get back less. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

Not all risks affecting the Sub-Fund are adequately captured by the summary risk indicator. This rating does not take into account other risk factors which should be considered before investing, these includes: Credit risk involves the risk that an issuer of a bond or similar money-market instruments or OTC derivative held by the Fund may default on its obligations to pay revenue and repay principal and the Fund will not recover its investment. Counterparty risk is the probability that the other party in an investment, credit, or trading transaction may not fulfill its part of the deal and may default on the contractual obligations. Interest rate risk is the risk that the value of an investment will change due to changes in the level of interest rates. The risk associated with the use of financial derivative, is related with the leverage structure of such products. Liquidity risk. This is the risk that the Fund will not be able to pay redemption proceeds within the time period stated in the Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Operational risk, the risk of failure due to human error or a problem in systems or/and processes. Please refer the "Risk factors" section of the prospectus of the Fund

Risk statistics

Standard Deviation:	1,07%
VaR:	0,86%
YTM	2,61%
Duration:	2,29 yrs

Standard deviation has been calculated using a data sample from the past 12 months. The VaR analysis employs the Historical Simulation method, using the 99th percentile as the confidence interval and historical data from the same 12-month period. The reported VaR level corresponds to a one-month VaR.

Complementary Information

The Sub-Fund is classified under Article 6 of Regulation (EU) 2019/2088 (SFDR). It does not promote environmental or social characteristics and does not have sustainable investment as its objective.

Copyright © Morningstar, Inc. All Right Reserved. Ratings are as of December 2025 and may change over time. The overall star rating for each fund is based on a weighted average of the number of stars assigned to it in the three-, five-, and ten-year rating periods. Morningstar stars rank from 1 to 5, with the top ranking being 5 stars. Glossary

Standard deviation: is the standard statistical measure for total volatility (risk). It measures how much returns fluctuate from the average over a certain period. Comparing different funds Products, higher Standard Deviation means the investment is riskier, as returns may vary significantly from the expected average.

Value at Risk percentage (VaR %): quantifies the maximum expected loss of a portfolio over a specified time period at a defined level of statistical confidence. For example, a monthly 99% VaR of 2% means that there is a 99% probability that the fund will not lose more than 2% of its value in any given month. (The 1% represents the chance that the loss will exceed 2%.)

Yield To Maturity (YTM): Represents the total return an investor can expect to earn if a bond is purchased at its current market price and held until maturity. It is the internal rate of return (IRR) that equates a bond's future cash flows to its current market price.

Duration: Is a measure of a bond's sensitivity to changes in interest rates. It represents the weighted average time, in years, required to receive the bond's cash flows. The higher the duration, the more sensitive the bond is to interest rate fluctuations.

Morning Star rating: ratings reflect the fund's historical performance, adjusted for risk, in comparison to similar funds within its category. These ratings are current as of December 2025 and may change over time. They are intended as a reference point and do not constitute investment advice or a guarantee of future results. The overall star rating for each fund is calculated using a weighted average of its ratings over the past 3-, 5-, and 10-year periods. Morningstar assigns ratings from 1 to 5 stars, with 5 stars representing the highest performance relative to similar funds in the same category.

Credit Spreads: Is the difference in interest rates (yields) between safe bonds and risky bonds. Credit spreads tell us how much extra return investors demand for taking on more risk.

Yield curve positioning: how the fund adjusts investments depending on interest rate levels across different maturities
